About Me

How much can a person accomplish with only a laptop and internet connection?

The answer for me is that you can acquire the skills needed to build software that Positively Impacts The World or at least that's what I did.

Starting with building a strong foundation in programming passing by android development and then moving to serverless cross-platform development.

My journey in self-learning software development demonstrate that I'm a person of action and I'm ready to climb the next mountain.

Personal Skills

- Ultra Learning
- Reverse Engineering
- Growth Mindset
- Analytical Thinking
- Lean Customer Development
